

# WordJumble

---

C++ Course assignment 2

*This is an implementation of version C in the assignment.*

## Created by

1. Ægir Máni Hauksson: aegir19@ru.is
2. Hákon Hákonarson: hakon19@ru.is

## How to play

---

### Windows

1. Open the root directory (contains the run.exe file) in terminal.
2. Type `run` in terminal

### Mac/Linux

1. Open root directory in terminal
2. Compile by typing the following command

```
$ g++ -o run.sh main.cp  
$ chmod +x run.sh
```

3. Type `./run.sh` in terminal

## How to add wordlist to the game

---

1. Create a new text file with a descriptive name in the root directory with the file ending `.txt`
2. Add words to the text file. (If you don't add anything the program will terminate with a warning message when you select it)
3. Add the name of the file **without the file ending `.txt`** into the text file called `word_lists.txt` also located in the root directory.

*A word should be a maximum of 255 characters. Otherwise the program will terminate with a warning message.*
